AB - J59083651 (A) A layer of polystyrene, polyethylene terephthalate or vinyl chloride resin, (B) an adhesive layer of at least one resin selected from ethylene/vinyl acetate copolymer, modified polyolefin and styrene/butadiene copolymer and (C) a layer of polyolefin are laminated in the order of (A)-(B)-(C)-(B)-(A) or (A)-(B)-(C) to give packing film.

- The polystyrene resin is high impact polystyrene, styrene/maleic acid copolymer, styrene/butadiene copolymer or styrene/acrylonitrile copolymer or a mixt. thereof. The polyethylene terephthalate is pref. copolyester where a portion of glycol is substd. by 1,4-cyclohexane dimethanol. The polyvinyl chloride is PVC, vinyl chloride/vinyl acetate copolymer, vinylidene chloride/acrylate ester or vinyl ester of higher fatty acid copolymer. The polyolefin resin is pref. polyethylene, polypropylene, ethylene/propylene copolymer or ionomer. The adhesive is pref. modified polyolefin prepd. by graft copolymerising with an unsatd. dicarboxylic acid or anhydride, ethylene/ethyl acrylate copolymer, styrene/butadiene copolymer or polyurethane resin.
- Film has high moisture blocking activity and high gas permeable activity.(0/0)
